

## ACKNOWLEDGEMENT

This thesis would never have been completed without the constant encouragement, guidance, criticism, suggestions, support and help from many people.

First and foremost, I would like to express my whole-hearted to my advisor, Dr. Chookiat Jarat, for guiding me through my M.A. journey at Buriram Rajabhat University (BRU). Throughout my study, he has been so supportive, helping, understanding, and patient during all these years. Whenever I needed help, he was always there giving me valuable guidance and directions. Without his professional mentoring and encouragement, I would not be able to finish my master's studies.

To Assistant Professor Sutamat Kotcharat, my co-advisor, I would like to extend my heartfelt appreciation for her guidance in this research with her knowledge, professional experience, criticism, support, encouragement, consultation, and valuable advice when I needed her assistance.

I also owe a special thank to my committee members who have given their time to read and comment on my work, which was appreciated – Assistant Professor Dr. Nawamin Prachanant, Dr. Jongkit Wongpinit, thank you for their insights, guidance and time to edit and proofread my paper and for their guidance, support and encouragement throughout the completion of this paper.

My appreciation is also expressed to three research experts who examined for validity and appropriateness of my lesson plans, the achievement test (pretest and posttest) and the satisfaction questionnaire, namely Dr. Surachai Piyanukool, Dr. Narumon Somkuna and Mr. Sarom Mok. They provided feedback and offered

proof reading on drafts of this thesis. Without their help, the entire effort would not have been as completed and finely tuned as it has come to be.

I extend my special thanks and appreciation to Prathomsuksa 4 students at Ban Nong Chum Sang School, Huai Thalaeng District, Nakhon Ratchasima Province for their participation throughout the experimental period.

I also would like to thank all the M.A. English teachers in English programme who had instructed and taught me at Buriram Rajabhat University (BRU).

I appreciate so much the help and support of my classmates, for their kind support and warm encouragement throughout my difficult times away from home. Without them, I could not have overcome my ups and downs and concentrate on my studies.

Finally, my greatest debt of thanks must be to my family, I offer my appreciation for their continuing support and unconditional love. In particular, I would like to express my gratitude to my parents for supporting me throughout my education. Thanks to my brother and my sister for looking after my mother. I would like to express my sincere thank to my beloved daughter, Natthanicha Srisuk, whose smiles have been the greatest motivation to complete this study. Without the support of my family, I am not sure I would have been able to fulfill this task. I dedicate the benefit of this thesis to them.
